## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments, see pages 6-7, filed 12/29/2009, with respect to the rejection(s) of claim(s) 1-22 under 103 (a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn.

### ***Allowable Subject Matter***

Claims 1-2, 4-22 (now renumbered 1-21) are allowed.

After reviewing the remarks made by the Applicant in response to the non-final office action the Examiner finds the remarks to be persuasive.

The combination of cited references (De Gasparis et al., "Automated Electrorotation: Dielectric Characterization of Living Cells by Real-time Motion Estimation." Meas. Sci. Technol. 9 (1998) 518-529 in view of U.S. Patent No. 7,501,233 to Gradl et al) does not teach or suggest the features of claims 1-22 or the newly added features. None teaches

*A controlled movement comprises a rotation of the at least one object by an influence of electrical field forces, said object being rotated around at least one of a predetermined axis and a predetermined rotation angle, and*

*Evaluating the data sets to obtain quantitative three-dimensional information of the at least one object, wherein said quantitative three-dimensional information represents a three-dimensional shape of the at least one object.*

No other found prior art of record teaches or fairly suggests the combination of claimed elements. The Examiner finds no reason or motivation to combine the above references in an obviousness rejection thus placing the application in condition for allowance.

Any comments considered necessary by applicant must be submitted on later than the payment of the issue fee and to avoid processing delays should preferably accompany the issue fee. Such submissions should be clearly labeled, comments on statement of reasons for allowance.
